

iCall 290 SIP-Touch

The iCall 290 SIP-Touch is a 7" full-colour resistive touch screen for easy use by rest home or hospital staff. This unit is equipped with an iCall LB connection, ethernet, microphone, speakers, outputs and more. This makes the device ideal for VOIP communication and a useful overview of active calls.

Functional Description

A maximum of 50 local bus units can be attached to each iCall 290 SIP-Touch unit. The local bus units are connected in a topology of choice using a four-wired cable connected to the four-pin plug connector at the back of these SIP units. The data network is connected through the LAN connector.

Features

- PoE powered with max of 5 LB buttons supported in a topology of choice
