

iCall IO-Station

This IO module is connected to the local bus using a 4 wire connection. The IO-module is programmed as one address on the bus, which can contain up to a maximum of 50 addresses. The IO-module contains 5 programmable inputs and 4 programmable outputs. The type of inputs can be normal open or normal closed. Individually and remotely programmable via browser. 24/7 supervised.

General system description

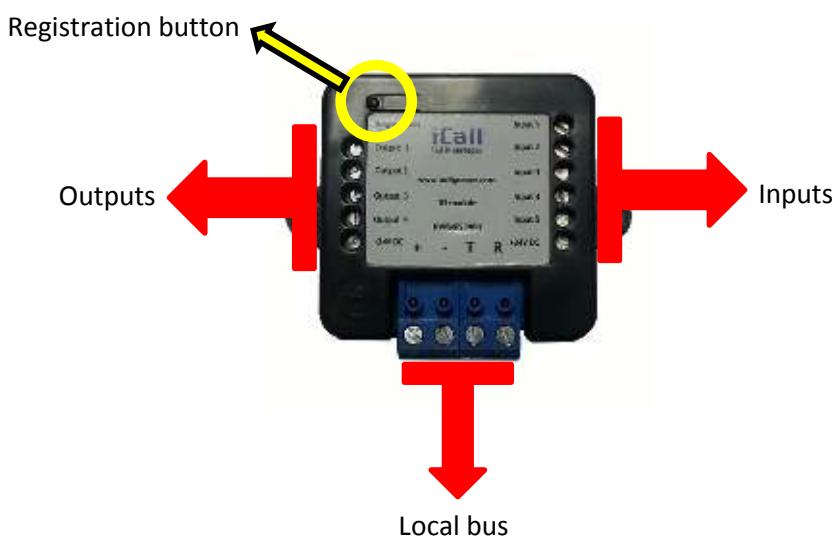

The local bus is a four wire bus that can be connected to any cable structure. Bus topology, star topology or a combination of both can be used. The maximum total cable length between the IP-units and the furthest LB-units on the bus is 1000m or the lowest voltage at the LB-units Tx or Rx wire is 18V DC. The four wire bus is composed of one wire conducting 24V DC, one wire serving as GND, one wire serving as Rx and one wire serving as Tx. The IP-unit can support up to 50 LB-units per bus. If there are more than 50 LB-units an additional IP unit is needed and another bus needs to be created.

Features

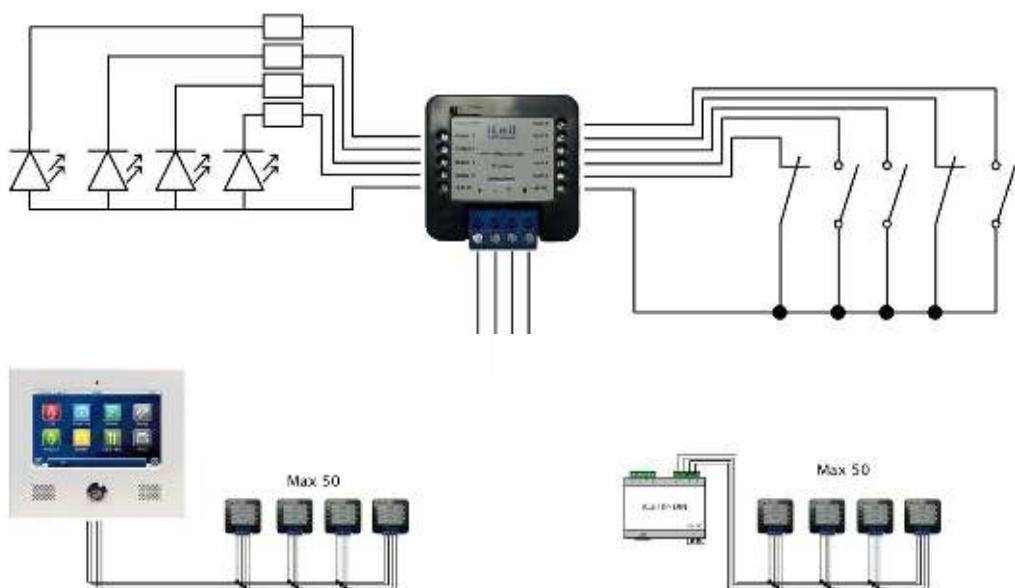

- 4 programmable outputs
 - o Call
 - o Toilet
 - o Present
 - o Buzzer
 - o OUTPUT 1 (activated and deactivated from the Netrix)
 - o OUTPUT 2 (activated and deactivated from the Netrix)
 - o OUTPUT 3 (activated and deactivated from the Netrix)
 - o OUTPUT 4 (activated and deactivated from the Netrix)
- 5 programmable inputs
 - o Call
 - o Toilet
 - o Present
 - o Assistance
 - o Urgence
 - o INPUT 1 (send to the Netrix)
 - o INPUT 2 (send to the Netrix)
 - o INPUT 3 (send to the Netrix)
 - o INPUT 4 (send to the Netrix)
 - o INPUT 5 (send to the Netrix)

- Removable 4 wire local bus connector
- Inputs can be Normal Open or Normal closed type
- Protected outputs
- Wall mountable
- Removable fixing point for use in wall mount boxes
- Integrated registration button in the housing
- Compatible with the EMEA products

Connections

Example connections

Order information

NWBAES3900 iCall IO-Station (EMEA)

Version

HW: iCall_IO V2.0
SW: iCall_IO V1.0

iCall IO V2.0
